

DON'T LET LIGHTNING DESTROY YOUR EQUIPMENT!

LET SOLLATEK **LightningGuard**
KEEP YOUR VITAL RESOURCES ALIVE

When Lightning strikes, it can damage your TV, video, radio, as well as computers and modems and plenty else besides. To avoid costly problems make sure your mains supply and telecom line is **TOTALLY** protected.

By buying a Sollatek LightningGuard.

Why do I need protection?

Power and telephone line connections will conduct high-energy electrical events such as local lightning strikes and power surges right to the heart of your equipment, often with devastating effects.

Even when machines are switched off the damage can range from data corruption to system destruction and you never know when it will happen.

The Sollatek LightningGuard protects your equipment all the time, by isolating harmful problems from your equipment. It protects from everyday spikes and power-back surges right through to surges from lightning generated on the mains & data lines.

Mains Protection

The LightningGuard prevents damage to equipment from over voltage levels of any duration. It works by disconnecting power when voltage levels exceed set parameters. Reconnection takes place when power returns to normal. Fully automatic in operation.

Data Protection

The LightningGuard automatically protects the data connection against lightning, spikes and surges travelling along the telecom lines, by completely clamping them to a safe level, without any interruption.

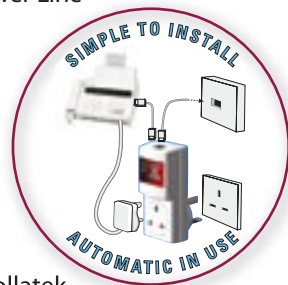

THE SOLLATEK **LightningGuard**

PROTECTS FROM:

- Lightning on the Telephone Line
- Surges & Spikes on the Telephone line
- Surges & Spikes on the Power Line
- Over Voltage on the Power Line
- Power-back Surges on the Power Line

PROTECTS YOUR:

- PCs • Telephones • Modems
- Fax machines • Internet
- All telecoms equipment
