

A *Sollatek* guide to protecting your fridge, freezer or cooler

your fridge/freezer needs protecting!

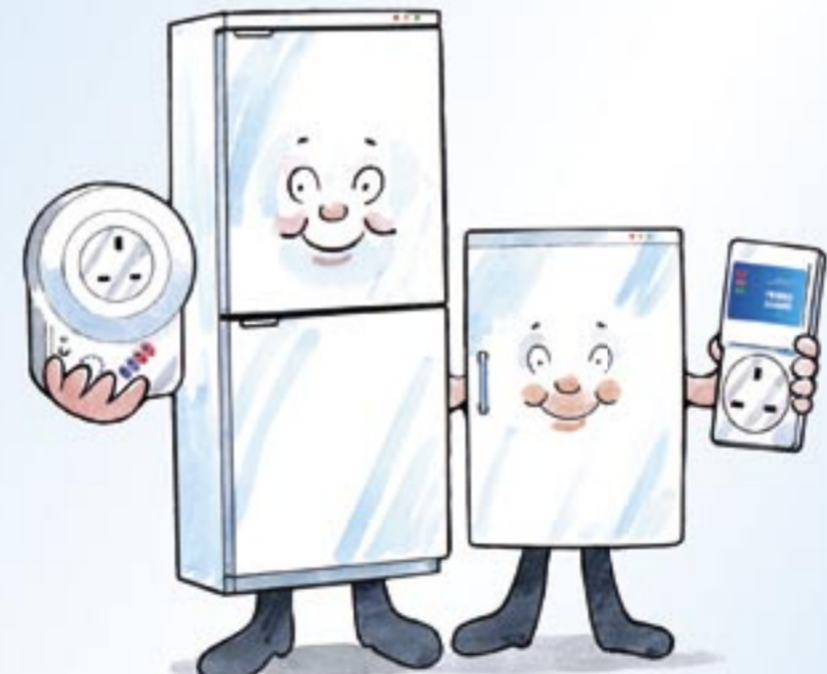

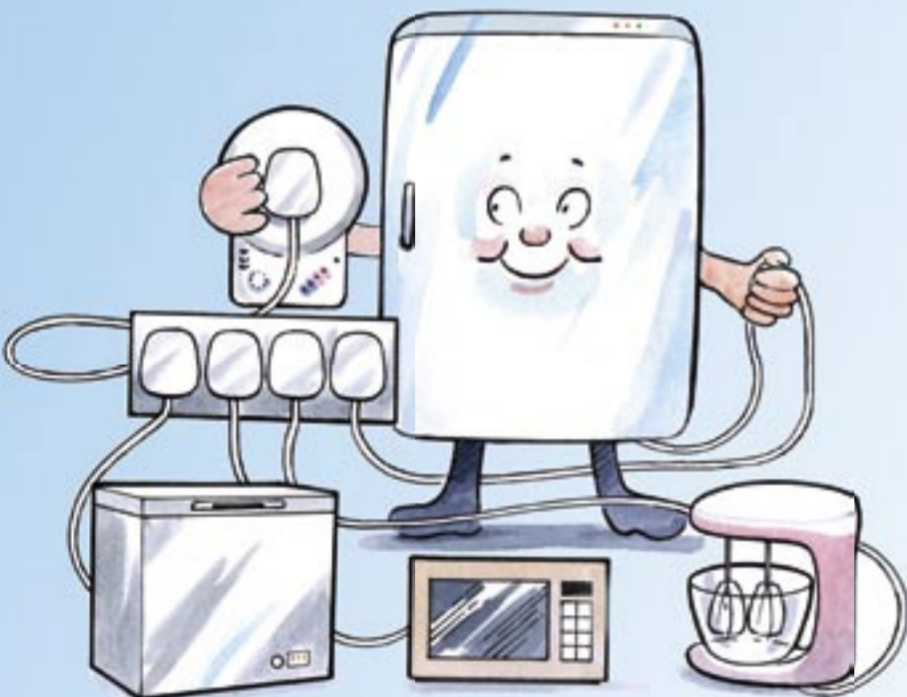

Appliances need healthy stable power to operate safely and for long periods of time without giving you trouble. Voltage and mains supply can be unreliable and often fluctuates. *Over 80% of appliance failure is caused by bad mains supply!*

So how do you protect against these problems ?

The worst damage for a fridge is a **BROWN-OUT** - that's when the mains power drops (you see your room lights dim!)

The **Sollatek FridgeGuard** will guard your fridge against this harmful condition and all voltage problems.

If your Fridge is big or you have many appliances you can use the **Sollatek AVS** to protect the lot.

For a large fridge/freezer use a **Sollatek AVS13**, and for a small fridge use a **Sollatek FridgeGuard**

Finally, if the brown outs are very long and often you can use a **Sollatek SVS** stabiliser to correct the voltage

protect your fridge with a **Sollatek FridgeGuard**

For large fridges and multiple appliance protection fit the **Sollatek AVS**

For ultimate security fit the **Sollatek SVS** stabiliser which combines the functions of a stabiliser as well as the FridgeGuard
